UCINITE

DIVISION OF UNITED-CARR

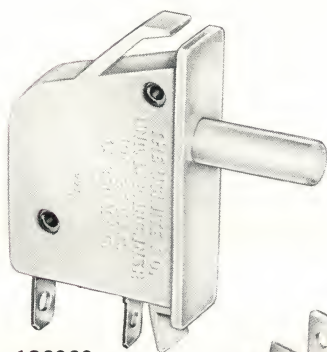

NEWTONVILLE, MASSACHUSETTS 02160

FOREWORD

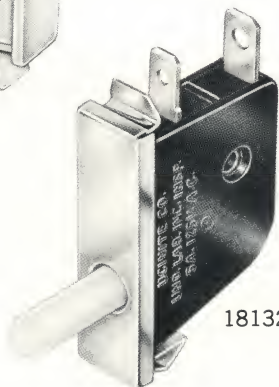

The Switches shown in this catalog represent a cross section of our custom and standard assemblies and are intended primarily to illustrate Ucinite capabilities in the area of secondary switching. Detailed bulletins giving mechanical and electrical specifications, dimensions, and application information are available on request. Because of our experience in custom designing and complete facilities for volume production, we invite inquiries regarding development of special switches or modifications of standard items to meet your requirements. Prices, packing, and delivery information may be obtained directly from The Ucinite Company, Newtonville, Massachusetts, or any District Sales Office. See listing on the back cover. Many of the parts shown are covered by patents issued or pending. All switches shown are listed by C.S.A. Testing Laboratories as approved and are Underwriters' Laboratories Inc. listed.

SINGLE POLE-SINGLE THROW (N.C.)

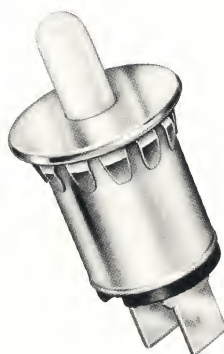

Shown below is a representative series of N.C. momentary contact switches designed by Ucinite to meet industries changing requirements for space, styling, and increased loads. Available in chrome or color to compliment panel finishes.

THE UCINITE COMPANY

SINGLE POLE-SINGLE THROW (N.O.)

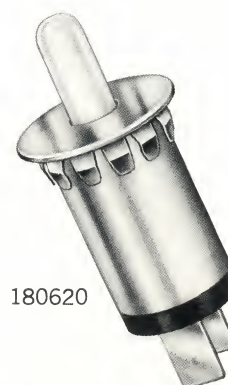

The same styling and design features are available with a normally open contact arrangement as those shown under the heading of single pole-single throw (N.C.).

186040

181281

180620

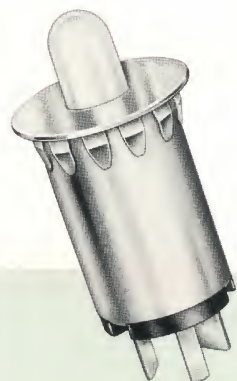

182100

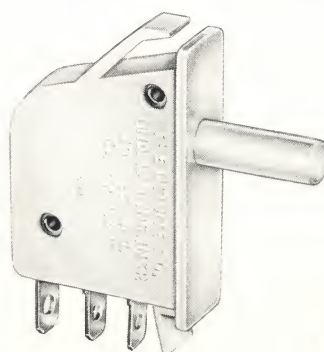

182104

SINGLE POLE-DOUBLE THROW

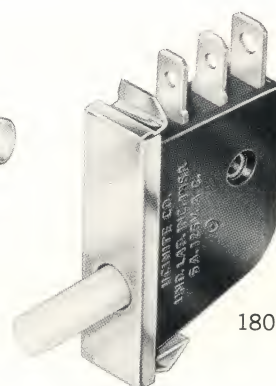

Designed for use where a common terminal can simplify wiring for the function of a light bulb and fan motor or ice maker. It eliminates the need for two single pole-single throw switches. Catalog numbers 180921 and 186001 are snap switches designed for increased loads.

180188

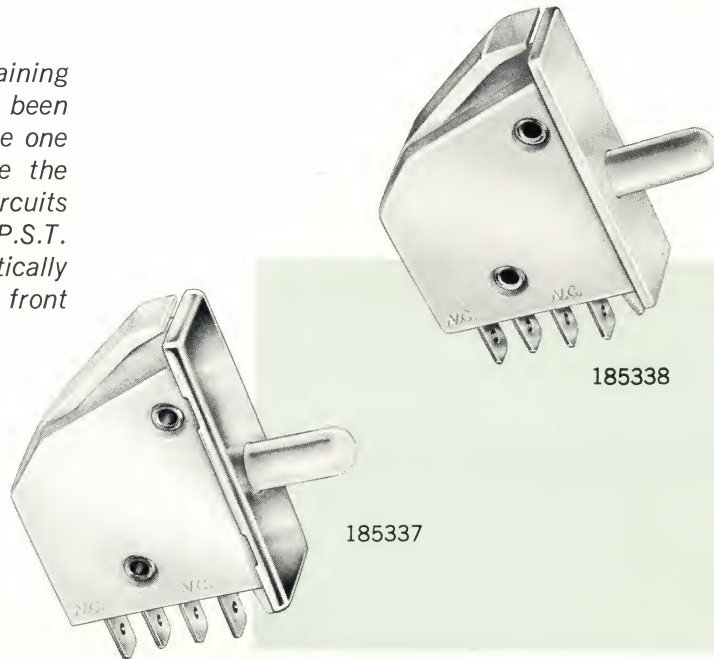

186001

180921

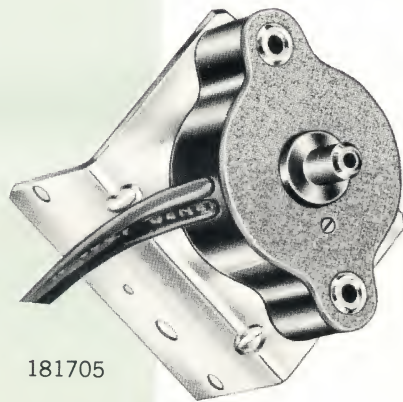

TWO CIRCUIT SWITCH

This new, compact switch containing two independent circuits has been designed for applications where one S.P.D.T. switch cannot handle the wiring requirements of two circuits or where the use of two S.P.S.T. switches would not be aesthetically pleasing. It features simplified front mounting snap-in design.

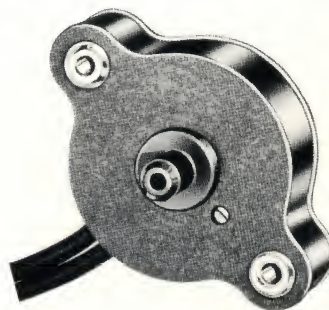

VACUUM SWITCH

Ucinite switches can be supplied for any specified fixed setting from a minimum of 5 ± 2 inches of water to a maximum of 60 ± 4 inches of water to close the circuit. Designed for use on such products as vacuum cleaners, air conditioners, and air filtering systems to signal filter change.
